

e-mail archiving

With module e-mail archiving you can easily save your mail from Microsoft Outlook in Predator archive.

All info in one place

Save all (combine with ScanManager) correspondence with debtors in the case document archive

Efficiency

Every email from you and others will be easily accessible and available to all your collectors

How it works:

Every collector using our solution will have new button in Microsoft outlook. One click on the button, together with a case number, will automatically store the email in Predators archive along with any attachments. In Predator you'll see a new history line you can right click and open the e-mail from.

It's also possible to select whether you want to store the mail body as a case note or not.

You can also update the debtors e-mail address by ticking this option.

The module "E-Mail Archiving" requires Microsoft Outlook to be installed.
