Effectively

save time by sending out electronic reminders with sms's

Profitable

minimum cost by sending out payment reminders electronically

Profit

SMSLink has documented clear improvement in the collection results

SMSLink

By using Predator SMSLink you can send SMS through Predator.

You can define templates for different text messages (SMS) sent as reminders to the debtor's cell phone. The templates containing merge variables that automatically retrieves information from the case of Predator and delivers the message finished out the cellphone to such debtor.

Examples of messages you can send to the debtor:

- Notifications
- Payment data with the KID
- Repayment Information
- Next due date and payment amount
- Total unpaid and oldest unpaid installment amount

In SMSLink it is easy to define different SMS messages which can then be defined as activities

in Predator. After this is done, the user can use the selected tasks in workflows, installment schemes or manually in case the Predator.

SMSLink can either be started manually or set up the scheduler once per day, or how often you wish.

If an SMS is not sent due, lack of phone number, you put up that you instead want to send a letter or e-mail. Predator will automatically generate an output data file which in turn addresses the SMS messages from the selected service provider.

In relation to the authorization for use of the module from the Commission and Inspectorate required quality of the recipient's mobile phone number. This can be done automatically using modules for washing.
