

ReportCenter

Predator module Report Center is a report generator that allows you to create simple lists without advanced knowledge of databases or programming

Easy

It is easy to make good lists

Automatic

You can easily set up automatically runs of regular reports

ReportCenter

The lists can be created directly by casehandlers. Then all connections, relationships, and other technical requirements are already set up in the administration section of the application. A preview of the final report is at all times available to the user.

All reports created can be stored for direct reuse later. It is also possible to export reports to other formats if you wish.

In all lists, you can easily select which fields should be included, as desired summation of, and how many levels you want on the report (drill down). It is also possible to produce the data in columns graphically as part of the report.
