

# Auto Anonymizer

The **Auto Anonymizer module** enables automatic anonymization of personal data in accordance with the requirements of GDPR. At the same time one can keep the data needed for general ledger and accounting. The automation simplifies processes and will save time and reduce the number of manual tasks.

The module is a tool to simplify or automate the anonymizing of collected personal information – in a robust and secure manner.

A variety of criteria for selection of items for anonymization can be set.

In an analysis phase you should find cases for anonymization. In this phase the data quality can also be checked. You can do it yourself or contact our service department, and a consultant from CONCENT can help you.

The Auto Anonymizer module has many options, such as:

- Remove all attached documents
- Remove all notes
- Remove all inbox tasks

When using the Auto Anonymizer module, you can enable a preview of all cases ready for anonymizing. This is giving you an assurance that what you are doing is correct.

The module can be run manually or it can be set to run automatically at specific times. The module anonymizes all data that can identify the debtor.

The log will show which cases that have been anonymized.

- ▶ **Avoid manual routines for deleting data**
- ▶ **Keep data for accounting and general ledger after anonymization**
- ▶ **In accordance with GDPR requirements**
- ▶ **Removes all personal data**
